To whom it may concern,

We, to the best of our knowledge, hereby confirm that all PUMA products are in accordance with Proposition 65. Chemicals in our products are not regulated under Proposition 65 or are in amounts that would not require a warning label.

For matter of completeness the following includes further information about how PUMA handles chemical product safety.

PUMA has implemented a Restricted Substances List for all its products. This list defines restrictions for harmful substances that guarantee compliance with legislation, defines even stricter requirements for many substances and is updated on a regularly level. The most updated version of the PUMA RSL and further information on PUMA's chemical management approach can be found here:

[PUMA® - Sustainability handbook and codes of conduct](#)

In general, all materials have to undergo a chemical analysis of a third-party testing institute and are not allowed to exceed the requirement of PUMA's Restricted Substances List. Each supplier of PUMA is bound by contractual agreement to comply with our standards and assures to only deliver goods that have passed extensive RSL testing.

The rest results are continuously reported to PUMA. This ensures that we can control that PUMA products do not contain substances of high concern and fulfill PUMA product safety standards.

Please do not hesitate to contact our PUMA Corporate Sustainability Team, if you have further questions or concerns.

Kind regards,

Veronique Rochet
Senior Head of Sustainability

Alex Ho
Teamhead Chemical Compliance
